DETAILED ACTION

Election/Restrictions

Claim 1-8,21-27 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), **claim 2,3,22,24** are directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 2/3/2010 is hereby withdrawn**. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 1-8,21-27 are allowable.

Regarding Claim 1,2,4,5,7,

Lee et al discloses (Fig. 4a) gate signal lines (31) which are arranged in parallel to each other and a plurality of drain signal lines (33) the pixel electrode and counter electrode.

Sakamoto et al (fig. 5) discloses the pixel region is constituted of divided respective regions; wherein in one region, the counter electrode made of one of a light-transmitting material (6) and a light-reflecting (5) material which is formed on the center except for a slight periphery of the region below an insulation film. The counter electrode (26a26b26c26d,26) covers the drain signal line (24) therefore to provide signals to all other pixels nearby by using the counter electrode's common line.

Towler et al discloses the insulation film has a larger thickness in another region (11, transmissive region) than one region such that a film thickness of liquid crystal layer in one region (active area 10) is approximately three times as large as a film thickness of a liquid crystal layer in another region (column 11, lines 55-65) to improve the brightness of the active region.

The prior art does not disclose the specifics of the counter electrode having a planar shape in one region below an insulation film and having the pixel electrode on top of the insulation film overlapping the planar counter electrode in the one region in

plan view. And in another region a group of electrodes of a counter electrode arranged below the insulation film and having the pixel electrode which constitutes a group of electrodes alternately arranged with the group of electrodes of the counter electrode in the region in plan view.

Claim 3,22,24 depends on Claim 2, therefore is allowed.

Claim 6,26 depends on Claim 5, therefore are allowed.

Claim 8,27 depends on Claim 7, therefore are allowed.

Claim 21,23 depends on Claim 1, therefore are allowed.

Claim 25 depends on Claim 4, therefore is allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
